Day & Date: 9th, 10th & 11th March, 2018 | **Time:** 9 am to 5 pm

Register On : 09004 246359 • 08779 755657

Venue: 151 D, August Kranti Marg, Opp. Gangar Eye Nation, Behind Vithal Court, Kemp's Corner, Malabar Hill, Mumbai - 400036

Course Content

10 steps to full mouth rehabilitation with live clinical case.

Step 1. Consultation, documentation and diagnosis and treatment planning.

Step 2. Demystifying - CR vs MIP, VDO -why, when, how & how much to raise the bite. Use of deprogrammer (koi's, Lucia jig) to record the bite face bow records and transfer of casts on articulator for wax up.

Step 3. Transfer of wax-up intra-orally for temporization followed by occlusal equilibration.

Step 4. Temporary guided tooth preparation -APT technique (burs and technique)

Step 5. Vertical & centric relation and facebow records. (Materials used for registration)

Step 6. Impression procedure - (single cord , double cord , impression materials).

Step 7. Temporization. (different materials)

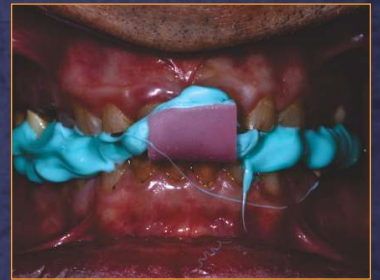

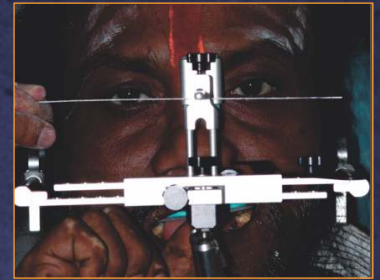

Step 8. In lab communication (evaluation of adjusted temporary teeth model over the final tooth preparation model via cad cam.)

Step 9. Final cementation (rubber dam, articulation papers, polishing burs, types of cements)

Step 10. Night guard, recall and maintenance instructions.

Hands-On

- Fabrication of lucia jig deprogrammer and deprogramming exercise.
- Making Face bow records and transfer to the articulator and programming of the articulator.
- Occlusal equilibration using different articulating papers
- Muscle palpitation exercise.

Why Do This Course?

For the first time in india, watch a live clinical case of Full Mouth Rehabilitation with ALL STEPS (Diagnosis & Treatment Planning to Final Cementation) from start to finish in 3 days.. Participants will have a clear understanding of the entire stomatognathic system which includes the tmj, muscles of mastication, teeth and their correlation. Practical guide to rehabilitation in 10 simple steps which will provide consistent and predictable results in every case.
